NESTLE SA (ADR) - (PINK:NSRGY)/NESTLE SA - (VTX:NESN)

Company Description:

Vevey, Switzerland - based Nestlé is the world's largest food company. Its four core businesses are beverages (global leader in instant coffee and mineral water with brands like Nescafe and Poland Spring); milk and dairy products (global leader in infant nutrition, No. 2 in ice-cream with brands like Gerber and Dreyer's); prepared dishes (Stouffer's), cooking aids and petcare (Purina); and chocolate and confectionery (global leader). NSRGY received 29 billion CHF for the sale of controlling interest in Alcon. Also included in associates is the group's 26% stake in L'Oreal. In 2001, Nestlé's petcare combined with Ralston Purina. Over 25% of rev are from US. 339,000 employees. There is one ADR per ORD. Has 333,000 employees. Chairman: Peter Brabeck-Letmathe, CEO: Paul Bulcke www.nestle.com Advertising: ?% of rev.

Basic Description:

NSRGY has a consistent rate of growth of net profits that has flattened out. The strength of the Swiss Franc has made growth challenging as currency translation effects are strong. NSRGY's profits are marked with charge-offs, like so many in the food processing space. P/E ratios have been pretty close to market multiples and stable due to a large collection of brands and distribution channels. The dividend yield has increased slightly as a result of the payout ratio moving from a payout ratio of 35% to 65%. As growth as slowed, NSRGY has also begun a more aggressive share buyback program over the past few years. Operating margins have expanded significantly, sustaining superior ROEs and ROCs. Note: VL report has significant share count errors; I have adjusted on co.desc. Operating margins as presented here are EBIT, not VL's presentation of EBITDA.

Profitability Description:

NSRGY has improved operating margins significantly and is continuing to exploit opportunities in the health, wellness and nutrition space. Coffee, skin care and petcare all have superior margins and make up 70% of profits. Real organic growth and acquisitions which fit existing footprints and distribution systems are critical to continue to drive margins. The three key segments continue to have 5% "real" organic growth rates. For analysis here, segments were reshuffled in 2007. Coffee is challenged in the U.S. market by "supersize" issue, but globally is strong. In fact, NSRGY serves up 6,000 of the 30,000 cups of coffee consumed per second. The balance sheet shows careful debt management and a buildup in intangibles and goodwill - a sign of a brand company. The majority of the earnings are going towards dividends and are increasing at an unsustainable rate. In addition, NSRGRY has made significant share repurchases - at an unsustainable level as well.

Core Advantage Description:

NSRGY is the largest company in the food and beverage space. The number of brands and the global scope is unparalleled in the industry. NSRGY has used its range of view to pursue the best categories and the best geographies. NSRGY's challenge has been to further capitalize on these advantages. NSRGY's financial strength is high which allows for sizeable acquisitions. The company has been innovating in the coffee space and Nespresso appears to be prospering as does Nescafe. Skincare and Petcare are highly profitable and growth areas in which NSRGY has some technology and marketing advantages. NSRGY does appear to be moving in a radical way - to a science-based health and nutrition emphasis.

Investment Thesis:

NSRGY should be able to continue to expand operating margins slowly by emphasizing more attractive segments (petcare, skincare and coffee) while driving top line "organically" of 5% with add-ons and innovation. This revenue growth combined with expanded margin for 2% and share repurchasing for an additional 2% should drive earnings growth of 9% while deserving a premium P/E of 20.

Purchase Description:

We would recommend patient, value-oriented investors purchase shares of NSRGY at CHF 57.50 per share as a Tier I up to 4.5% (based on an ave of hist. ratios and three models time the organic growth rate of 5%). At "normal" exchange rates with CHF, the buy price would be \$63 per ADR as a Tier I and \$69.50 up to 3% with trim price of \$96.80 and a sell of \$105 (based on cap'l charge).

Industry Overview

NSRGY is in a class of dominant consumer food processing companies. This brain washing ability is what sets these companies apart from their competitors. By trial and error, these companies have discovered that it does not pay to be third in a market. They either function as dominant players or get out. Clearly, private lable players are continuously putting pressure on consumers to make a switch and save money. The result is that these consumer franchises need to continuously innovate in order to maintain and expand margins. The candy business does not have such a powerful private label business competition. Cheese and dairy has been less resistant to private labelling than snacks.

by	NSRGY	8/12/2009	170.00	6,709	39.46	1.5%
by	NSRGY	4/20/2010	160.00	7,846	49.04	3.0%

Discussion of Buys/Sells

What:	The return of NSRGY on the first tranche was 89% and SP 103% for an underperformance of 14% over six years. The return of NESN on the first tranche was 71% and SP 103% for an underperformance of 32% over six years. By the first quarter 2013, most of the return of NSRGY and NESN occurred and had outperformed. Since then, NSRGY has underperformed. The return of NSRGY on the second tranche was 53% and SP 73% for an underperformance of 20% over 5.5 years. The return of NESN on the second tranche was 38% and SP 73% for an underperformance of 35% over 5.5 years. Most of the return of NSRGY over NESN occurred in 2010 and remained. Little difference if started in 2011.
So what:	It appears that we were able to purchase a superior company which we had researched for eight years prior. On our initial purchase, we had NSRGY as a Tier II, but only purchased 1.5% - probably due to our first "foreign" stock. This purchase was at 13X earnings. On our second purchase, we had moved NSRGY to a Tier I, but the pricing only allowed the 3% purchase - due to a run up in stock. The pricing was now 15X earnings for a first buy and about 17X for the second at 3%.
Now what:	NSRGY has had consistent predictable returns. In 2006, we predicted CHF 4/share in 2016 and they are now estimated at CHF 3.5/share. NSRGY has had to deal with consistent strong currency headwinds. Consistent with our thesis of purchasing foreign companies on a strong domestic currency, we purchased at pockets of dollar strength. NSRGY stock runs fairly expensive for us at times of dollar weakness, although these are periods that generate superior performance. Takeaway: look for strong foreign companies, write reports, get Tiering correct and buy during times of dollar strength and reduce at times of dollar weakness. Takeaway: use ADR for pricing; creates a good currency adjustment.
