

QUANTITATIVE RESEARCH EVALUATION TEMPLATE

Article citation as per APA formatting:

Brief description of the topic or question of the study: what were they trying to find out? (NOT the results)

Why does this question matter? (Why do we want to know, according to the authors?)

Methodology

- What do the authors call their method or study design?
- Population sample (description and numbers):
- Type of data and sources (what kind of data & where did they get it?):
- Outcome measures (not the results, but the ways they measured the results):
- How did they control for possible confounding variables or other threats to validity?

Main results according to the authors, but in your own words:

How would you briefly explain this study (including results) to a colleague?

Questions you have about the methods described in this study?

Questions you have about the results (significance, validity, meaning)?

Do you see any application to your practice?
